

# Business Statement & Executive Summary

## Business Statement

"To optimize end-to-end supply chain operations, reduce inventory holding costs, and minimize stockouts by implementing a centralized, data-driven Global Supply Chain & Inventory Optimization Dashboard that delivers real-time visibility into inventory levels, supplier performance, and fulfillment metrics."

## Business Problems Solved

- **Stockouts & Overstocking:** Inability to maintain optimal safety stock levels, leading to stockouts of key items or excess holding costs from overstocking.
- **Inventory Turnover & Holding Costs:** High carrying costs and slow inventory turnover rates due to a lack of visibility across regional warehouses.
- **Supply Chain Disruptions & Lead Time Variability:** Inconsistent vendor lead times and delay tracking across global suppliers, affecting fulfillment reliability.
- **Order Fulfillment & On-Time Performance:** Fragmented visibility into order status, order cycle times, and fulfillment bottlenecks across distribution channels

## Executive Summary

The **Global Supply Chain & Inventory Optimization Dashboard** provides a unified analytical platform to streamline global logistics and inventory management. By consolidating data from procurement, warehousing, and sales distribution, the dashboard equips supply chain managers and stakeholders with actionable insights to drive efficiency and reduce operational overhead.

- **Inventory Optimization:** Tracks stock levels, reorder points, and turnover rates across distribution networks to maintain lean inventory while preventing stockouts.
- **Supplier & Logistics Monitoring:** Measures vendor fulfillment performance, shipment lead times, and delivery accuracy to identify supply chain bottlenecks and improve supplier reliability.
- **Cost Efficiency:** Analyzes carrying costs, stockout impacts, and logistics expenses to support data-driven procurement and inventory strategy decisions
